An Introduction To Heavy Tailed In probability theory, heavy-tailed distributions are probability distributions whose tails are not exponentially bounded: that is, they have heavier tails than the exponential distribution. In many applications it is the right tail of the distribution that is of interest, but a distribution may have a heavy left tail, or both tails may be heavy. There are three important subclasses of heavy-tailed distributions: the fat-tailed distributions, the long-tailed distributions and the subexponential Heavy-tailed distribution - Wikipedia From the reviews: The book An Introduction to Heavy-Tailed and Subexponential Distributions
