... Kauffman (K4)states empirically

that superficial air velocities of from

0.7 to 3.1 ft./min. will give states of agitation ranging from “moderate” to “violent” in a liquid depth of 9 ft.

Dunkley and Perry (D3) and Perry and Dunkley (P4) have found the blending performance to depend in a complicated way on tank and air inlet geometry, depth of liquid, and liquid viscosity; while ... Mixing and Agitation - PDF Free Download 1.

Introduction Agitation is the process of providing bulk motion to a liquid, thus aiding mixing and dispersion.

Agitation of liquids is usually accomplished in a container equipped with an impeller such as propeller, paddle, or

turbine. AGITATION Final Report -

LinkedIn SlideShare Mixing is the movement of fluids and solids to enhance a process result, which is accomplished by means of an

agitation source. The process of mixing is concerned with all combinations of phases, of which the most frequently occurring include gases with gases, gases into liquids, and gases with granular solids. Chapter 10 - Mixing and Agitation - ScienceDirect Mixing the movement of fluids and solids to enhance a process result is accomplished by means of an agitation source. For example, the sun is the agitation source for mixing in the earth's atmosphere. Similarly, an air compressor and/or a mechanical mixer is the agitation source in any municipal wastewater treatment plant to enhance the process results of (1) solids suspension and (2) oxygen absorption from sparged or entrained air. Chapter 10: Mixing

Engineering360 Agitation is a means whereby mixing of phases can be accomplished and by which mass and heat transfer can be enhanced between phases or with external surfaces. In its most general sense, the process of mixing is concerned with all combinations of phases of which the most frequently occurring ones are 1. gases with gases. 2. Short Term Training Programme On "Process Engineering ... The chapter provides a background for the engineer who must assess and use these new contributions, reviews the extensive published literature on mixing and agitation, and presents useful results and techniques of approach that can be used to achieve understanding of

many mixing situations. Mixing and

Chapter 9 Agitation And Mixing Michigan Technological For bench-, pilot-, and production-scale fermenters, the mixing is usually provided by mechanical agitation with or without aeration. The most widely used arrangement is the radial-flow impeller with six flat blades mounted on a disk (Figure 9.1), which is called flat-blade disk turbine or Rushton turbine.
