To obtain the melting point range, you record the temperature at which the first crystals begin to melt (solid to liquid phase) and the temperature at which the last crystal melts, eg; m.p. 124-126 o C. Important considerations include: 1. do you have a representative sample of your compound or have you fished out the best looking crystal for a melting point; and 2. is the thermometer you are using correctly calibrated. If not, you will obtain incorrect values.
